COMPLETE YOUR PROJECT BY 21ST JUNE 2020

Year 10 World Affairs Reading Project for Geography

Investigating Floods

Hazardous sinkholes. Major mudslides. Uprooted trees. The heavy rains during a flood can cause a devastating amount of damage in a short time. Get an up-close look at how these disasters form and learn about some of history's worst floods.

Using the information in the project book and additional research, evaluate the impact of climate change on flooding both in the UK and wider world. Consider how climate change may increase the risk of river flooding and coastal flooding through sea level rise. Also, outline the strategies used to try and prevent increased flooding due to climate change. You may want to use this article to support your response.

Your form tutor can check your progress and will be doing this each week. You will get 'literacy' Class Chart points for each text you read and each quiz you successfully complete [3 for each].
